CLINICAL INTERESTS AND SPECIAL EXPERTISE

A) RECONSTRUCTIVE MICROSURGERY:-

Over past 30 years, I have been actively involved in different aspects of Reconstructive Microsurgery. Having undergone training in Basic Techniques of Reconstructive Microsurgery & Burns at the **Nuffield Research Centre**, Stoke Mandeville Hospital, Aylesbury U.K. and in Reconstructive Cancer Surgery at the **Royal Marshden Hospital**, and St. Georges' Hospital, London, I have established a division of Reconstructive Microsurgery & Burns at the Grant Medical College, Mumbai and the Bombay Hospital and Medical Research Centre, Mumbai, India. I have the credit of performing first successful Microvascular free tissue transfer following subtotal Mandibulectomy, way back in 1981.

Thereafter, I had advanced Fellowship in Microsurgery at the **National Cancer Centre. Tokyo** Japan in 1985 and updated and furthered my experiences in Reconstructive Micro- surgery in Cancer Surgery.

I had successfully completed an Advanced Post-doctoral Fellowship in Microsurgery at the **International Microsurgical Research Centre, Eastern Virginia Graduate School of Medicine**, at the **Medical College of Hampton Roads**, Norfolk, Virginia USA, in 90 - 91. I have performed over Eleven hundred procedures of Micro Vascular Free Tissue Transfers.

B) MICROSURGICAL VASCULARISED BONE TRANSFER: -

Over past 25 years, I have successfully performed over 150 Vascularized Bone transfer for a variety of clinical conditions like post traumatic, post excision defects of long bones, aplasia / hypoplasia of mandible, radius and / or pseudo-arthrosis of long bones etc. I have initiated transfer of Vascularized epiphysis / hemi - joint in children for deformities affecting growth of the bony skeleton and soft tissue, secondary to developmental defects like T.M.J. Ankylosis or Hemi-facial Microsomia.

C) FUNCTIONAL MUSCLE TRANSFERS :-

Rehabilitation following proximal nerve lesions or extensive soft tissue loss or atrophy compromising muscle functions has been made possible by micro-neurovascular functional muscle transfers. I have been performing these precision, state of the art surgery for last eighteen years with significant success. Over One Hundred and fifty procedures of Functioning Muscle Transfers have been undertaken for cases of Pre-ganglionic Brachial Plexus Root Avulsion Injuries, Facial Paralysis, Soft Tissue Excision Defects and Volkmann's Ischaemic Contracture. Similar procedures have also been performed with limited success in cases of post-polio paralysis involving upper extremities.

D) RE-VASCULARIZATION OF THE HEAD OF THE FEMUR

Re-vascularization of the a-vascular Head of the Femur, using Micro vascular transfer of Vascularized Fibular Diaphyseal Shaft has opened up a new chapter in the management of a-vascular Necrosis of the Head of the Femur in younger patients. I have performed this procedure on 28 femoral heads and results are extremely encouraging.
